

Breast Cancer Screening (BCS)

What We Measure:

The measure evaluates the percentage of women 50–74 years of age who had a mammogram to screen for breast cancer anytime on or between October 1—two years before the measurement year through December 31 of the measurement year.

Why it Matters:

It is important to get regular breast exams because early detection is your best chance to find cancer in the early stages. According to the American Cancer Society, when breast cancer is detected early, and has not spread, the 5-year relative survival rate is 99%. Breast cancer that is found early is easier to treat successfully.

Breast cancer is sometimes found after symptoms appear, but many women with breast cancer have no symptoms. This is why regular breast cancer screening is so important.

Lines of Business Affected: ● Medicare

Tips and Best Practices

- Ensure an order or prescription for a mammogram is given during annual wellness visits and/or well-woman exams for women 50-74 years old.
- Consider implementing a standing order and/or automated referrals for members eligible for mammography.
- It is important to submit the appropriate ICD-10 diagnosis code for a member’s history of bilateral mastectomy, Z90.13.
- Proper documentation of mammography and exclusion in the patient’s medical record:
 - ▶ Provide results and findings of mammogram performed.
 - ▶ Document screening in the “medical history” section of the record and update the section annually/biannually.

Description	CODE
Mammograms	CPT: 77061–77063, 77065–77067
Bilateral Mastectomy	ICD-10: Z90.13
