Review of denials

Any time we make a decision to deny, reduce, suspend or stop coverage of certain services, Home State Health will send you and your patient written notification. The denial notice includes information on the availability of a medical director to discuss the decision.

**Peer-to-peer reviews**
If a request for medical services is denied because of a lack of medical necessity, a provider can request a peer-to-peer review with our medical director on the member’s behalf. The medical director may be contacted by calling Home State at **1-855-694-HOME (4663)**, ext. **45118**. A case manager may also coordinate communication between the medical director and the requesting practitioner as needed.

**Filing appeals**
The denial notice will also inform you and our member about how to file an appeal. In urgent cases, an expedited appeal is available and can be submitted orally or in writing.

Please remember to always include sufficient clinical information when submitting prior authorization requests to allow Home State Health to make timely medical necessity decisions based on complete information.

REMINDER: Don’t delay on credentialing

During the credentialing and recredentialing process, Home State Health obtains information from various outside sources, such as state licensing agencies and the National Practitioner Data Bank.

Practitioners have the right to review primary source materials collected during this process. If any information gathered as part of the primary source verification process differs from data submitted by the practitioner on the credentialing application, Home State Health will notify the practitioner and request clarification.

A written explanation detailing the error or the difference in information must be submitted to Home State Health in order to be included as part of the credentialing and recredentialing process. It’s important that we receive this information in a timely manner to avoid delays in credentialing decisions.

Providers also have the right to request the status of their credentialing or recredentialing applications at any time by contacting Provider Services at **1-855-694-HOME (4663)** or by email at CHHS_PROVIDER_ROSTER@CENTENE.COM.

Winter 2017
**Advance directives:**
The conversation can start with you

Advance directives can be a sensitive topic to bring up with your patients, but it’s vital they understand their rights to execute these important documents. Home State Health wants to make sure our members are getting the guidance and information they need, regardless of their current health status.

We encourage you to explain this process to your patients and to show them how to file the right forms. Patients should give one copy of the executed advance directive to the person(s) designated to be involved in their care decisions and send one copy to your office so it can be filed with their medical records.

Providers are required to document provision of information and note whether patients have an advance directive in their permanent medical records.

In accordance with MO HealthNet program requirements and Home State Health credentialing and participation policies, all Home State Health members age 18 and older must receive information regarding advance directives that explains the definition and purpose of advance directives as well as the right of patients to execute such advance directives. This notification must be documented in each adult patient’s medical record. Home State Health will perform medical record audits on a random sample of providers on an annual basis.

As part of the credentialing and recredentialing process, a signed attestation indicating the provider is compliant with the advanced directive requirements must be submitted.

**What our members are saying**

The Consumer Assessment of Healthcare Providers and Systems (CAHPS®) surveys ask consumers and patients to report on and evaluate their experiences with healthcare. Survey results are submitted to the National Committee for Quality Assurance to meet accreditation requirements. These surveys are completed annually and reflect feedback about the care they receive from our providers, as well as the service they receive from the health plan. Home State Health will use the results to guide our improvement efforts.

We also want to share the results with you, since you and your staff are vital components of our members’ satisfaction.

Here are some key findings from the survey. Areas where we scored well include:

- Getting care quickly
- Customer service
- How well doctors communicate

Based on the feedback we received, some of the areas we have been working to improve include:

- Getting needed care
- Rating of healthcare
- Rating of specialist

Home State Health takes our members’ concerns seriously and will work with you to improve members’ satisfaction in the future.

---

**Let us know your plans**

Our goal is to provide seamless care for our members. To support this goal, it’s important that we know if you’re planning to move, change phone numbers or leave the network.

To ensure that your contact information and status are up to date, visit our secure provider portal at [www.HomeStateHealth.com](http://www.HomeStateHealth.com) or call 1-855-694-HOME (4663). Please let us know at least 30 days before you expect a change to your information.

---

HEDIS FOR DIABETES CARE
The HEDIS measure for comprehensive diabetes care is directed to adult patients ages 18 to 75 who have type 1 or type 2 diabetes.

- **HbA1c testing**: Completed at least annually. Both CPT codes 83036 and 83037 can be submitted when this test is completed.

- **HbA1c level**:
  - HbA1c result > 9 = poor control (CPT II code 3046F)
  - HbA1c result < 8 = in control (CPT II code 3045F)

- **Dilated retinal eye exam**: Exam in previous two years

- **Medical care for nephropathy**: At least one of the following: nephropathy screening, ACE/ARB therapy or documented evidence of nephropathy

- **Blood pressure**: < 140/90 mm Hg considered in control

**What providers can do**

1. **Dilated retinal eye exam**: Home State Health can assist your office with finding a vision provider. Our vision vendors support our efforts by contacting members in need of retinal eye exams to assist them in scheduling an appointment.

2. **Nephropathy screening test**: A spot urine dipstick for microalbumin or a random urine test for protein/creatinine ratio are two methods that meet the requirement for nephropathy screening. You may offer either to your patients.

**Why HEDIS matters**

HEDIS, the Healthcare Effectiveness Data and Information Set, is a list of standardized performance measures updated and published annually by the National Committee for Quality Assurance (NCQA). HEDIS is a tool used by most of America’s health plans to measure performance on important aspects of care and service.

HEDIS is designed to provide purchasers and consumers with the information they need to reliably compare healthcare plans. Final HEDIS rates are typically reported to NCQA and state agencies once a year.

Through HEDIS, NCQA holds Home State Health accountable for the timeliness and quality of healthcare services (acute, preventive, mental health, etc.) delivered to its diverse membership. Home State Health also reviews HEDIS rates on an ongoing basis and continually looks for ways to improve those rates. It’s an important part of our commitment to providing access to high-quality and appropriate care to our members.

Please consider the HEDIS topics covered in this issue: diabetes, high blood pressure and cardiovascular disease. Also, review Home State Health’s clinical practice guidelines at www.HomeStateHealth.com and encourage your Home State members to contact Home State Health for help managing their medical conditions. Home State case management staff members are available to assist with patients who have difficulty managing their conditions, challenges adhering to prescribed medications or difficulty filling their prescriptions. If you have a member you feel could benefit from our case management program, please contact Home State Health Member Services at 1-855-694-HOME (4663) and ask for medical case management.
HEDIS for high blood pressure

The medical costs of high blood pressure total more than $46 billion annually. This number could increase to $274 billion by 2030. Approximately 1 in 3 U.S. adults, or about 70 million people, has high blood pressure, but only about half of these people have it under control.

The high blood pressure control HEDIS measure applies to the percentage of adults 18 to 85 years old who had a diagnosis of hypertension and whose blood pressure was adequately controlled during the measurement year. Adequate control is defined by the following criteria:

- Adults 18 to 59 years of age whose blood pressure was less than 140/90 mm Hg
- Adults 60 to 85 years of age, with a diagnosis of diabetes, whose blood pressure was less than 140/90 mm Hg
- Adults 60 to 85 years of age, without a diagnosis of diabetes, whose blood pressure was less than 150/90 mm Hg

Exclusions apply if there is evidence of the following during the measurement year:

- End-stage renal disease
- Kidney transplant or dialysis
- Pregnancy
- Non-acute inpatient admission

What providers can do

1. Teach patients how lifestyle changes can control high blood pressure:
   Encourage low-sodium diets, increased physical activity and smoking cessation.

2. Prescribe and follow up on blood pressure medication:
   Patients may assume that because they “feel good,” they may stop filling their prescriptions. Confirm that they understand the importance of keeping up with these prescriptions.

HEDIS for cardiovascular disease

- The HEDIS measure for persistence of beta-blocker treatment after heart attack applies to the percentage of adults 18 years of age and older during the measurement year who were hospitalized and then discharged with a diagnosis of acute myocardial infarction.
- The HEDIS measure for statin therapy for patients with cardiovascular disease applies to men ages 21 to 75 and women ages 40 to 75. Rates reported include:
  - Members who received at least one high- or moderate-intensity statin therapy during the measurement year
  - Members who remained on a high- or moderate-intensity statin medication for at least 80 percent of the treatment period, from prescription date through end of year

What providers can do

1. Suggest specific lifestyle changes: Quitting smoking, losing excess weight, beginning an exercise program and improving nutrition are valuable health goals. However, broad goals like these are hard to attain. Instead, stress the value of small changes over time.

2. Stress the value of prescribed medications for managing heart disease: Home State Health can provide educational materials and other resources addressing the above topics.
